Approved media for the Acuity LED 1600

euromedia

Fujifilm's professional brand for Large Format Printing includes a complete range of high performance media, display systems and finishing tools. It is designed for printers with a wide range of experience, but with a common enthusiasm for quality and innovation.

Fujifilm invests time and industry expertise in understanding which products deliver added value for you and your customers. Each product is hand-picked as the best for the job to give high print quality at the right price.

With over 600 media products to choose from, you will always find the right solution to your application. From posters, indoor and outdoor banners, flags, exhibition graphics, sign-making and vehicle wraps to backlit and art prints, our media range includes all the usual LFP materials, but with euromedia you'll also find a great range of innovative products for creative applications.

27 approved medias to get you started right away!

27 media products ready to go

To complement the launch of Fujifilm's latest printer, we have tested a wide range of media and as a result have now selected 27 different products as 'Acuity LED approved'. These have been particularly successful with our customers and have become some of our best sellers. They also impress with their innovative properties which guarantee quality and make print finishing easier. All of the media that carry this label have been thoroughly tested on the Acuity LED 1600 and then in their application. 'Approved media' also means that ICC profiles are already available for the most important RIPs.

Using this package of printing system and media, high quality and rapid results can be produced right from the start. This saves time and money – a unique package from Fujifilm.
